

AFRICA'S INSTANT PAYMENT PLATFORM

The *PIX* of Africa. Built on Bank-to-Bank Rails.

Unlocking instant transactions for 44M+ enterprises and 400M+ unbanked adults. Zero card network fees. Built for instant, sovereign interbank ledger transfers.

GLOBAL VISION

"Every asset will be tokenized... and every payment will become instant, frictionless, and peer-to-peer."

— Financial Consensus · 2026

THE INVESTMENT

Raising R10M— R12M

≈ \$555k — \$667k USD · Seed Facility

THE TOLL OF INTERMEDIARIES

Venture capital invests in companies. But the real asset is the founder. Card networks charge *2.5% to 3.5%* and settle in *1 to 3 days*.

44 Million+

SMES LOCKED IN THE CASH LOOP

The vast majority either pay crippling card processing fees or avoid digital payments entirely, operating on cash — exposing themselves to robbery, counterfeit currency, and invisibility to the formal economy.

A merchant processing R100,000/month on cards loses R30,000 to R42,000 per year to Visa, Mastercard, acquiring banks, and payment processors.

THE PSEUDO-DIGITAL ILLUSION

SnapScan is not the alternative.

Underneath its QR code interface, SnapScan charges 2.95% per transaction because it routes through the exact same card networks. The QR code is a prettier front door to the same expensive house.

THE UNBANKED REALITY

57% of adults have no bank account.

Over 400 million people have no digital payments access. Cards and SnapScan were never built for them. The infrastructure exists in South Africa — what's missing is the application layer. That's PayDuka.

A TRILLION-DOLLAR PROVEN MODEL

PayDuka is not inventing a new paradigm. We are bringing *Brazil's PIX miracle* to the African continent.

THE LATAM PARADIGM

PIX changed Brazil overnight.

Launched in Nov 2020. By 2024, it processed **64 billion transactions** — more than all credit and debit cards in Brazil combined. 150M+ people use it. Merchant fees dropped from 2%+ to 0.22%. Cashless, instant, bank-to-bank ledger.

PIX Transaction Fees

0.22% average

User Penetration

150 Million+

THE SOUTH AFRICAN BLUEPRINT

The rails are live. The App layer is missing.

South Africa now has the exact same underlying infrastructure ready to be captured. 11 major banks are fully integrated.

PayShap API (Launched 2023)

PayShap Request (Launched Dec 2024)

Capitec Pay Direct APIs

Instant Interbank

Pull Requests

Capped at R7/tx

THREE SEGMENTED PATHWAYS

One single, seamless interface. The merchant automatically receives the *lowest fee* and the *fastest settlement* path available.

PATH 1 — LOWEST COST

PayDuka Wallet

MERCHANT FEE: R2 — R3 FLAT · INSTANT

Customer links their bank once and enables auto-refill (e.g. pulls R1,000 when balance drops below R500). Wallet maintains itself invisibly.

Structural internal ledger transfer bypasses standard card network tolls completely. Serves unbanked populations via integrated cash agents.

PATH 2 — SPEED & LIQUIDITY

Card with Advance

SPREAD FEE: 1.0% — 2.0% · SAME-DAY

Customer pays with standard Visa or Mastercard (2.5–3.5% network fee applies).

Instead of waiting 1–3 business days, PayDuka advances the settlement amount directly into the merchant's wallet within minutes. Liquidity is resolved.

PATH 3 — DIRECT RAILS

Direct Bank

MERCHANT FEE: R5 — R7 FLAT · INSTANT

Customer does not have a wallet but owns a traditional bank account. PayDuka pulls money instantly via integrated bank APIs.

Routes via PayShap Request or Capitec Pay. Bypasses credit card schemes entirely, offering safe interbank clearance.

FINANCING THE LIQUIDITY GAP

PayDuka does not simply route transactions. We finance the *receivable gaps* generated by card networks.

THE LIQUIDITY GAP

A restaurant owner who does R30,000 on Friday night cannot buy fresh food Saturday morning.

Card schemes hold funds for 1 to 3 days. Small businesses are choked of basic operational capital.

PayDuka Same-Day Advance: When a card transaction is authorized, we instantly credit the merchant's internal wallet (minus a 1.0–2.0% advance fee). We then collect from the networks later.

NO COMPETITOR OFFERS THIS. Yoco, iKhokha, SnapScan settle strictly on card scheme timelines.

RISK-CONTROLLED INVESTMENT

Why this is nearly risk-free:

The receivable is confirmed — the scheme has already authorized the payment. We are lending against near-certain capital with a 1-3 day duration. Chargeback risks are mitigated through a 5% rolling reserve, advanced fraud scoring, and a 30-day vetting qualification period.

REDUCING INTERMEDIARY COSTS

Drastic cost comparison for a typical merchant processing *R100,000 / month* (400 transactions).

METRICS	YOCO (CARD)	SNAPSCAN (QR)	PAYDUKA (BLENDED)*	PAYDUKA (100% WALLET)
Monthly Toll Fees	R2,750	R2,950	R2,200	R800 — R1,200
Annual Fee Drain	R33,000	R35,400	R26,400	R9,600 — R14,400
Settlement Speed	1 — 3 Days	Next Day	Instant / Same-Day	Instant (<2s)
Same-Day Advance?	No	No	Yes	Not Needed
Serves Unbanked?	No	No	Yes	Yes (via agents)

*PayDuka Blended assumes an early-stage transaction mix: 40% wallet ledger transfers, 40% standard card network settlements, and 20% same-day card advances.

Merchants capture financial savings from day one, and save more as ecosystem network effects expand.

Point-of-Sale Conversion Loop

Merchants are heavily motivated to suggest wallet payments (R2–R3 vs. R25–R35 credit card fees). Simple counter signage ("Pay with PayDuka — it's faster") drives organic, zero-CAC consumer wallet acquisition.

MARKET PENETRATION MAPS

Deploying direct value across the entire financial hierarchy.

01 · SOWETO RETAIL

Saves R18,600—R25,800/yr

A corner grocery store processing R100k/mo. Bypasses standard card terminal delays and gets instant cash flow with card advances to restock fresh goods daily.

02 · STREET COMMERCE

Bypasses absolute cash risk

A taxi rank vendor. No bank terminals. Displays a printed QR code. Consumers scan and pay in 2 seconds. Eliminates the physical danger of cash and counterfeiting.

03 · THE UNBANKED

Sovereign wallet accounts

An unbanked domestic worker. Receives salary via P2P ledger. Loads cash at local spaza shops. Pays anyone seamlessly via scan. PayDuka becomes their secure bank.

04 · CROSS-BORDER (PHASE 4)

USDC Settlements on Polygon < 60 seconds

Kenyan retailer paying a South African merchant \$2,000. Under traditional banking: takes 3-5 days and costs \$100-\$160. Under PayDuka stablecoin layers: settles in under 60 seconds for a total fee of \$10-\$20. Saving per transfer: **\$80 – \$140**.

05 · FRANCHISE PILOT (PHASE 3) — LIVE VALIDATION

A live, breathing proof-of-concept store

We run a pilot franchise retail store. Every transaction processes through PayDuka PoS. Staff salaries paid via wallets. 6 months of hard operational data — transactional speeds, settlement reliability, margins — becomes our pitch to national giants like SPAR, Pick n Pay, and Food Lover's Market.

ROBUST ARCHITECTURAL LAYERING

Five independent, highly decoupled and replaceable execution layers.

LAYER 1 Application Frontends	React Native Consumer & Merchant PoS apps (Android/iOS). QR scanning engine, native biometric authentication, auto-refill management, card reader bluetooth connectivity, PayShap Request.
LAYER 2 Modular Backend API	NestJS on AWS Cape Town region. Append-only transactions ledger stored in PostgreSQL + Redis cache. Asynchronous queue processing via BullMQ. Auth, Wallet, Refill, Advance, Fraud services.
LAYER 3 Bank-to-Bank Rails	Direct integrations via Stitch API: PayShap Request, Capitec Pay, DebiCheck auto-refill mandates, standard debit card acquiring. M-Pesa API integration for East Africa.
LAYER 4 The Advance Engine	Calculates real-time merchant credit risk levels, validates card schemes authorizations, instantly moves cash to wallets. Continuous reconciliation with acquirer settlements.
LAYER 5 (PHASE 3+) Decoupled Web3 Registry	Polygon Mainnet. SettlementRegistry smart contracts store immutable proof of clearance. ERC-20 PDukaToken loyalty mechanisms. Completely decoupled — core operations run uninterrupted if Polygon stalls.

EXECUTION TIMELINES

A structured 26-month path to continental scale.

PHASE & TIMELINE	WHAT'S DELIVERED	BUDGET COST (ZAR)
Phase 0 · Foundation Month 1	Legal structures, licensing arrangements, Stitch API agreement, card acquiring partnerships, core team onboarded.	R280,000
Phase 1 · Payment MVP Months 2–5	Android client & Merchant apps, wallet core with auto-refill, card payments with same-day advance liquidity, pilot: 50 merchants.	R2.2M — R2.75M
Phase 2 · Launch Months 6–9	iOS apps release, agent cash on-ramps for unbanked, merchant auto-settlement engines. Target: 500+ merchants, 10,000+ wallets.	R3.4M — R4.0M
Phase 3 · Web3 & Kenya Months 10–13	Audited Polygon smart contracts, loyalty token mechanics, live franchise pilot store, Kenya launch with 50 merchants.	R4.5M — R5.7M
Phase 4 · Cross-Border Months 14–18	Stablecoin cross-border settlement (SA↔Kenya), token exchange listings, yield staking systems.	R7.1M — R9.5M
Phase 5 · Scale Africa Months 19–26	Nigeria & Ghana rollout, hardware PoS deployments (NFC, solar-powered, offline operations), developer SDKs.	R11.9M — R16.65M

FUNDING MILESTONES

To revenue-generating MVP (end Phase 1): ~**R2.5M** (~\$139k USD)
To full commercial launch (end Phase 2): ~**R6.4M** (~\$356k USD)

UNIT SUSTAINABILITY

Unit economics turn positive during Phase 2. The platform is projected to become fully self-funding from Phase 3 onward via merchant fee margins, advance spreads, and SaaS subscriptions.

PROJECTED REVENUES & SCALE METRICS

Aggregated Year 1 to Year 3 scaling models.

REVENUE STREAM	YEAR1	YEAR2	YEAR3
Wallet transactions (R2-R3 flat)	R2.4M	R9.6M	R24.0M
Card processing margins	R1.8M	R7.2M	R18.0M
Same-day advance fees (1.0–2.0%)	R1.5M	R6.0M	R15.0M
Cross-border settlements	—	R1.2M	R4.8M
Merchant SaaS software	R0.3M	R1.2M	R3.0M
Wallet float pool interest	R0.6M	R2.4M	R6.0M
Token rewards ecosystem	—	R0.6M	R1.8M
AGGREGATE REVENUES	R6.6M	R28.2M	R72.6M

OPERATIONAL SCALE METRICS

ACTIVE MERCHANTS

2,000 → 20,000

Y1 to Y3 expansion

CUSTOMER WALLETS

30,000 → 500,000

Passive user onboarding

MONTHLY TRANSACTIONS

500,000 → 5.0M

Network clearing volumes

MONTHLY PAYMENT TPV

R50M → R500M

Underlying transaction value

Ecosystem Corridors: Year 1: South Africa core. Year 2: South Africa + Kenya corridor. Year 3: Multi-country corridors open (Nigeria, Ghana).

Revenue streams are strictly diversified: no single product line exceeds 35% of total. The unique same-day advance fee product generates R15M/year by Year 3 at 80%+ gross margin. Wallet float interest scales passively, and cross-border stablecoin transfers become highly material in Year 2.

THE OPPORTUNITY & CAPITAL STRUCTURE

Join us in building Africa's *next financial powerhouse*.

INVESTMENT REQUIRED

R10M — R12M

≈ \$555,000 — \$667,000 USD · Seed Facility

Funding drives development through commercial launch (Phase 2), delivering **500+ active merchants, 10,000+ wallets**, and monthly processing exceeding R500k.

ALLOCATION: 6-person core engineering team · AWS Cloud & APIs · Acquiring licenses · Advance liquidity seed · Spaza cash agent setups · marketing

WHY WE WIN & WHY NOW

1. Unmatched Merchant Proposition

We offer the lowest flat fees (R2–R3), same-day card advances (no competitor does this), and instant digital inclusion for unbanked workers.

2. Timing: The Rails Are Live Today

PayShap Request launched in Dec 2024. Capitec Pay capped direct API fees at R7. Brazil proved that bank-to-bank instant transfers replace cards (64B transactions). South Africa's rails are live. The team that builds the best application layer wins.

The future of African payments is account-to-account. We are building it.
